

## ?? Can you guess the skull??

Bug Blitz has been working on a new 'Bone Discovery Trail' and thought we would share a sneak peak! Here is one of our new additions. Can you guess what it is? We will give you some clues:

- 1) I no longer exist (**extinct**) however, sightings have been reported.
- 2) I lived in New Guinea, mainland Australia and Tasmania.
- 3) I am a **marsupial** and my pouch opened rearward.
- 4) Check out my teeth, they are **carnivorous**.
- 5) My skull is remarkably similar to a dog.

Can you guess what animal this skull belongs to? Fill in the blanks.

\_\_\_\_\_

### Extinct

Having no living members of the species remaining anywhere.  
Not in the wild or captivity.

### Marsupial

A type of mammal that is not completely developed when it is born and is carried around in a pouch, where it is fed and protected until it is completely developed.

### Carnivorous

Means 'meat eater.' An organism that gets its energy and nutrients from a diet consisting mainly of animal tissue.
