

*"Where Science, Art, Language, Technology,  
Maths and Civics collide"*

## Is it Living or Non-living?

You are living right? YES!! That is because you:

**MOVE**, **GROW**, **BREATH**, need **FOOD** and **WATER**, are **SENSITIVE** to changes in your environment (hot or cold), can **REPRODUCE** (make babies) and **EXCRETE** (go to the toilet).

When you are wanting to find out if something is **living** or not, ask yourself:

- Does it eat or need nutrients to survive?
- Does it grow and change?
- Can it make babies or more of itself?
- Can it die?
- Did it come from a living thing?

**Activity 1:** Can you put a  next to the images that you think are **living** ?

**Activity 2:** Can you go outside and see **5 living things** and **5 non-living things**?
